## About

---

I am a Fullstack Developer with solid experience in building scalable platforms, working at companies such as Pecege and Brisanet (serving over 1 million customers). I have contributed to the development of systems with over 130,000 visits and projects in partnership with USP (University of São Paulo), focusing on delivering real impact and high performance. Throughout my career, I have worked with a wide range of technologies, including React, React Native, TypeScript, Next.js, Node.js, Nest.js, Fastify, Prisma, Firebase, Postgres, and more.

## Experience

---

### Pecege

*Software Developer*

📅 Aug 2022 – Present

📍 Remote, Piracicaba - SP

- Maintenance of a platform (Mbx Defesas) where students present their final projects for MBA courses. This platform is partnered with one of the largest universities in Brazil, the University of São Paulo (USP). The system has hosted 86,000 presentations and received over 130,000 visits in total.
- Successfully designed and implemented the social cards feature within the Mbx Defesas system. This feature allowed students to share their final course grades on social media, increasing engagement and visibility for the platform.
- Developed a platform for creating and managing events, including ticket sales and an admin panel to streamline control and organization. This platform hosted 36 events, the most popular of which had 10,000 attendees and 21,000 registered users.
- Built a participant check-in app using React Native to scan tickets and check in participants at events.

### Brisanet

*Front-End Developer*

📅 May 2021 – Aug 2022 (~ 1 year 3 months)

📍 Remote, Juazeiro do Norte - CE

- Developed an automatic debit feature that streamlined and accelerated the payment process for our customers, providing a more convenient and efficient experience.
- Responsible for implementing frontend testing using Jest and Cypress, ensuring application quality and robustness, resulting in successful deliveries and high user satisfaction.
- Created dynamic dashboards with charts and advanced filters for internal team management. These tools provided valuable insights, enabling better decision-making and improving operational performance.

## Projects

---

**Mbx Defesas (Social Cards)** — *React, Next.js, Typescript, TailwindCSS, Firebase, Vercel*

**October 2023**

- Designed and developed the social cards feature that allows users to share their thesis defense results on social media.
- This feature helped promote the product and attract more clients to the company.

**Linka Eventos Organizer** — *React Native, Expo, NativeWind, Typescript*

**October 2024**

- This app enables event organizers to view participant data and perform check-ins by scanning QR codes on tickets.
- The project supported the company's event team by streamlining participant management and flow during internal events.
